### Model answer

In this little factory's production of plastic paper clips, there are four primary steps. Two of these steps are concerned with the actual preparation of the clips, while the other two are concerned with quality control before the clips are shipped from the factory to the merchants for public sale.

To begin, molten plastic is poured into three distinct molds, one for each color; the hues are red, blue, and yellow. Next, a quality control machine inspects the strength of the clips when they emerge from the molds. Unacceptable clips are discarded. The pins are manually stored in two groups, mixed and single colours, at the third stage. After this stage, the groups are double-checked to ensure that the colour mixtures are accurately separated into single colours and mixed colour batches. The clips are then packaged and shipped to the marketplaces.
