

## IELTS WRITING TASK 2

**Q-As computers are being used more and more in education; teachers will soon have no role in the classroom.**

There is no doubt that since the arrival of computers, education and the learning process has changed: searching for information has become more accessible and entertaining, and data availability has increased. However, while expert systems have improved the intelligence of computers, they have not yet replaced human interaction in the learning process. As a result, what may be expected, in my opinion, is a shift in the role of the teachers rather than their elimination from the classroom.

Nobody can deny that learning is more enjoyable and accessible when computers are involved. For a youngster, the simple act of touching and exploring this instrument is a pleasurable experience. This, combined with a relaxed attitude and software interactivity, usually aids in acquiring new information. Furthermore, the availability of digital books, simulators, and other academic materials at a higher educational level offers students an always accessible supply of information that would otherwise be unavailable.

However, despite the rising complexity and behavior of intelligent software, which is often incorporated in academic digital content, the requirement for human contact in the learning process will continue to exist, at least for the foreseeable future. It is necessary for a human being to determine what each individual's distinct demands are. No matter how clever its software is, a machine will never replicate a teacher's experience teaching and adapting complex concepts to various individuals.

Teachers should be more aware of their position as guides in acquiring information rather than transmitters of facts as computers become a mainstream instrument for instruction. As a result, teachers must be open-minded to changes in the environment, stay current, and participate as problem solvers in the learning process, allowing students to uncover the truth for themselves.

In conclusion, teachers, especially at the primary level, play and will continue to play an essential role in the classroom, in my opinion. There will never be a substitute for human interaction, no matter how complex computers get, but there will be a change in how this relationship occurs.
