

IELTS WRITING TASK 1

Q-Write a report for a university lecturer describing the information in the graph below.

Model answer:

Between 1960 and 2000, the rate of smoking among men and women in Homeland was compared. It can be seen that smoking rates are currently dropping for both men and women and that fewer women have smoked throughout time.

In 1960, 600 guys out of every 1,000 smoked. By 1974, the number had dropped to 500, and by 2000, it had fallen even more precipitously to 250. On the other hand, women smoked at an alarmingly low rate of 80 per 1,000 in 1960. By 1968, it had risen to 170, and by 1977, it had grown even further, to 320. The rate of female smokers remained steady at 320 until 1984, when it began to decline, eventually falling to 200 by 2000.

Finally, we can see that while men's smoking rates decreased over time, they remained greater than women's rates. On the other hand, women's smoking rates climbed until 1977, then declined for the remainder of the time.
